

AFTERNOON CLUB

Aspiring Youth's Afternoon Club combines our summer camp activities with homework help to provide support for neurodiverse children. With most school systems going fully online in the fall, our students need a supportive environment where they can continue their social growth.

Participants in Afternoon Club will be sorted into "pods" of 7-8 children that remain the same with the same two Lead Facilitators over the course of 10 weeks. Facilitators lead their group in lunchtime conversation, a social skill-building activity, and one hour of homework support before transitioning to more active and play-based activities in the later afternoon.

Aspiring Youth Facilitators use fun activities to engage their students while providing social skills coaching to guide them in making and sustaining friendships. Popular activities include: Ryther Challenge course, gardening in the three community gardens on campus, playground and group games in the covered play area, hands-on building and science experiments, cooking and baking projects, comedy improv games, and social tech time.

Location: Ryther Main Campus, 2400 NE 95th Street, Seattle, WA 98115

When: Monday–Thursday, 12:00 PM–4:30 PM

Runs the week of October 5th through the week of December 14th. No program the week of Thanksgiving. Option to select three or four days per week (three day families select their preferred days), however, families must commit to all 10 weeks of the program.

Who: Children ages 8-12 who have completed an Enrollment Meeting with Aspiring Youth. Pods will be capped at 7-8 children with two Lead Facilitators

Fees: Three days: \$3,500. Four days: \$4,000.

Each option includes two phone consultations with a Lead Facilitator. This program is available through private pay or DDA funding.

To enroll: email info@aspiringyouth.net or call 206.517.0241

COVID-19 Safety: The Afternoon Club program will adhere to all county, state, and federal guidelines set for youth programming and childcare, including social distancing, mask wearing, and daily symptom checks.
