

U.S. DAIRY IS ON THE PATH TO NET ZERO

BY 2050, WE WILL:

- ACHIEVE CARBON NEUTRALITY OR BETTER
- OPTIMIZE OUR WATER USAGE & MAXIMIZE RECYCLING
- MANAGE MANURE AND NUTRIENTS TO IMPROVE WATER QUALITY

U.S. Dairy has always been committed to nourishing people, communities and the planet to foster a sustainable future.

In one decade, we reduced the carbon footprint of each gallon of milk by 19%, using 30% less water and 21% less land¹ — with the simple goal to give more than we take.

To learn more about the Innovation Center for U.S. Dairy, our progress and how we are reaching our 2050 Environmental Stewardship Goals, visit USDairy.com/Sustainability.
