

June 2021

Happy End of Spring & Start of Next Level Learning!

We need your help staying energy efficient this summer! Schools have never had as many occupants during the summer as they will this year, and their capacity to manage the heat will be tested as we move into Next Level Learning.

Building and engineering staff will be doing their best to help maintain comfortable temperatures in all buildings, but we will need to work together to manage this challenge. We appreciate your patience as we focus on ensuring students have a comfortable learning environment. You can help by...

- **Turning off lights when a room is vacant**
- **Shutting off computer monitors and projectors when not in use**
- **Unplugging electronics if possible**
- **Switching off half of the lights in a room if there's enough natural light**

Printing & Publications Planted Over 950 Trees

Printing & Publications, in partnership with PrintReleaf and Xerox, are funding reforestation efforts. The paper consumption at P&P is used to calculate a "paper footprint", which is equal to a specific and accurate number of trees. New trees are planted in direct relation to this usage.

...that's equal to nearly 8 MILLION sheets of paper!

All of these efforts - from planting trees to conserving energy - contribute to OPS' larger mission and Strategic Plan as we work to become better stewards of our environment and preserve our planet for generations to come.
