How Can I Create a Meaningful Online Learning Experience for Students?

Effective online teaching requires more than just transitioning face-to-face instructional strategies into the online classroom; it requires rethinking the teaching-learning dynamic to embrace students' active role in the learning process. Approaching online teaching with a learning paradigm allows faculty to shift from content provider and focus on creating and facilitating an engaging learning experience.

This Magna 20-Minute Mentor explores the functional and actionable mindset needed to design an effective online learning experience. Instructors will learn to focus on things that have an actual impact on student learning, or adopt a mindset that prevents wasting

time on teaching tasks that don't have an impact. Additionally, faculty will gain a better understanding of the philosophy that drives effective learning in the online classroom to help shift their mindsets.

Upon completion of this program, you'll be able to:

- Differentiate between an instructional paradigm and a learning paradigm
- Grasp the advantages for embracing a learning paradigm in the online classroom
- Understand how a learning paradigm is reflected in online course design
- Appreciate the impact of teaching via a learning paradigm in the modern era
